Greg:

The TCEQ and EPA are planning a cleanup action at this bankrupt facility in Houston, TX. We will have industrial wastewater that is located within various containers on the property. I wanted to find out from you what type of analytical GCWDA would need to accept this contaminated water. At this point, we do not know volumes and have no analytical.

Additionally, for cost estimate purposes, what would be an approximate cost/gallon and any break point for volume.

Additionally, if you can accept this contaminated water do you guys have a way to discount the cost due to the fact that you guys are a governmental organization similar to us.

Also, are you guys approved to accept contaminated wastewater from CERCLA Sites?

Thanks

Gary Moore
